Subject: RE: Draft Proposal to West Lake RPs on additional characterization and sediment samples along the northeast portion of the landfill property

Just spoke with, Paul.

All the outfalls in the current storm water monitoring proposal, including NCC-004 which is located slightly up-gradient from the SED4 locations, were collected from May 10 to May 12 this month (Last week). These storm water samples will be analyzed for Radium, Uranium, and Thorium.

I personally think this is sufficient but we could always collect an additional sample from storm water that is located down gradient from SED4 which is where we intend to collect additional sediment samples.

I'll discuss with Brad and Justin later this afternoon and we can make a final decision at that time.

Tom

Lynn and Alyse,

Let me know what you think of sending the following email to Paul R. for additional characterization and collection of sediment samples between the location of Sediment 4 and the detention pond on the north corner of the landfill property located between the Area 2 fence and St. Charles Rock Road. Let me know what you think. I am particularly interested in your thoughts on the last paragraph.

Paul,

Ex. 5 - Deliberative

Ex. 5 - Deliberative

Please let me know if you have any questions about these proposed sampling plans. Also, please coordinate with me on the timing for collection of the sediment samples.

Tom Mahler

On-Scene Coordinator
